

INTELLI WMS

- Accurate Inventory Management
- Minimises Stockout Situations
- Improves Operational Efficiency
- Supports Decision Making
- Increases Productivity
- Improves Picking Efficiency
- Facilitates Shipping Accuracy

The competitive manufacturing environment of today demands greater efficiencies of scale, and more so in the complex domain of production. With e-commerce taking centre stage, it's increasingly important for companies to maximize supply chain efficiency. But the manufacturing process itself, a key element in the supply chain causes major concern in most manufacturing setups. It's here that inaccurate inventory levels and poor scheduling slow down the entire fulfillment process. The need to improve inventory accuracy in raw materials, WIP, and finished goods is essential to reduce manufacturing cycle time. The benefits of accuracy is a direct derivative of the increasing demands of e-commerce.

IntelliWMS is an ideal solution for an enterprise that seeks to improve inventory accuracy, increasing operational efficiency and enhancing manpower productivity, that leads to provide better customer service at reduced operational cost.

IntelliWMS... Integrates Smoothly with ERP Environments

IntelliWMS ensures that warehouses, and their Supply Chain, are supported by an intelligent execution system designed to maximize the value of real-time information. These warehouses are able to respond quickly and accurately to changes elsewhere in the organization due to the dynamic communication between the ERP system and the WMS. The limited functionality of ERP gets adequately neutralised when integrated with an intelligent WMS solution. The reason for this is simple. While it sits on the ERP, WMS ensures that it retains its intelligence and logic for the warehouse management function. And as a Best of Breed solution, IntelliWMS ensures that it is compatible with latest technologies and environments and drives the Warehouse Management Activity.

INTELLI WMS

CAPABILITY CHART	BATCH BRONZE	RF SILVER	RF GOLD	RF PLATINUM
Batch Portable Applications	X	X	X	X
Cycle Counting	X	X	X	X
Moves/Transfers	X	X	X	X

Features

- Available in Batch and Real-time Radio frequency (RF) versions. The software offers advanced and controlled warehouse management features such as Directed Picking and Put-away, Cubing, Wave Management, Pallet Building, Directed Cross Docking and Direct Replenishment.
- Positioned as a global solution with its language independent feature which includes Asian language support.
- Designed with upgrade and scalability consideration. It uses the industry standard RDBMS Microsoft® SQL Server, which is known to handle hundreds of users and tens of thousands of SKU's with very good response time. Developed with the latest Microsoft® technology and tools, assuring required compatibility.
- An ideal solution for warehouse operations in manufacturing, distribution, retail, government, and healthcare.
- Currently Compatible with most HHP and PSC hand held terminals. Future versions will support Intermec and Symbol terminals and PDAs.
- Internet & Intranet Support will be provided in future versions for seamless integration ensuring real time multiwarehouse support
- SAP R/3 Interfaceable
- ODBC Support which facilitates easier import/export of data

IntelliWMS Software is Available in 4 Versions:

- IntelliWMS Batch Bronze (Five users)
- IntelliWMS RF Silver (Five users)
- IntelliWMS RF Gold (Twentyfive users)
- IntelliWMS RF Platinum (Unlimited users)

Database

Microsoft® MSDE 2.0 database is included for 5 users
Microsoft® SQL Server 2000 purchased separately

Software Maintenance and Support

Standard maintenance contract includes free software upgrades and technical support during normal business hours

Optional Components

- Additional RF client license beyond those included in base package (see Capability Chart)
- RF client license for additional RF Portables
- SAP/R3 interfacing
- Microsoft® SQL Server 2000
- Technical Services such as site surveys, consultation, installation and implementation, training and customization

APPLICATION SERVERS and WORKSTATIONS

Complete Warehouse Management Solution

- Windows® 2000 compatible • Microsoft® SQL Server compatible

System Requirements - Server

	Processor	RAM	Free Hard Disk	OS
Minimum	PIII 800 Mhz	256 MB	5 GB	Windows NT 4.0 SP6
Recommended	PIV 1.7 Ghz	512 MB	10 GB	Windows 2000 Server

System Requirements - Client Workstation

	Processor	RAM	Free Hard Disk	OS
Minimum	PII 300 Mhz	64 MB	250 MB	Windows 98 SE
Recommended	PIII 1.33 Ghz	128 MB	500 MB	Windows 2000 Professional
